

AMENDMENT

In The Specification:

The paragraph on page 5, lines 12-18, has obvious translation errors comparing with the claimed Priority Document (Chinese version), please replace with :

The material of the hydrophilic shell is the polymer polymerized from waterborne polyurethane in the water phase and lipophilic monomer in the organic phase. The waterborne polyurethane in the water phase is, for example, waterborne polyurethane containing 2,2-bis(hydroxymethyl) propionic or its acid triethylamine salt, waterborne urethane containing sulfite salt diethylamine salt and mixtures thereof. The lipophilic monomer in the organic phase is, for example, melamine or isocyanate salt.
